

# Birthday Board app

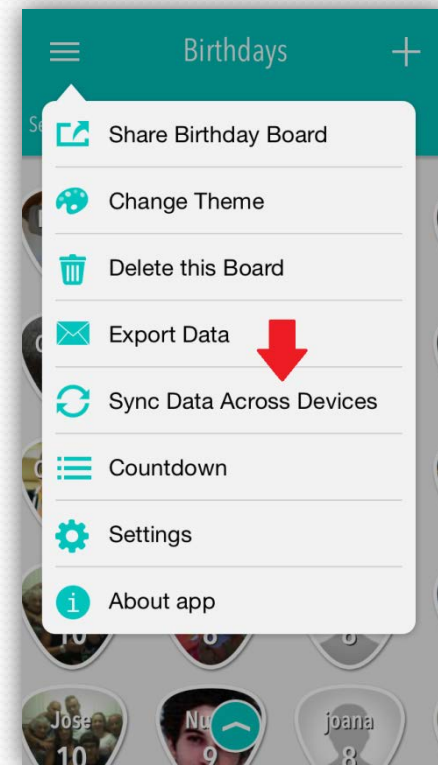

How to use the feature  
**Sync Data Across Devices**

# Now it is possible to sync the Birthday Board app on all your iOS devices. (only with the pro version)

1- Open the BB app on your iPhone/iPad, click on the Menu button on the top.

2- Select the option, Sync Data Across Devices

# Login to the BB Cloud

BB cloud is completely secure, and is use only to save the data from your boards.

Login with Facebook or login with you BB Cloud account.

If you don't have an account yet, create one, just by inserting a username, password and email.

Close **Authorizing** ⓘ

Synchronization allows you to have birthday or event data on all your devices. You need a BirthdayBoard Cloud user in order to use cloud syncing. You can do this in two ways: Login with your Facebook account or create new user account on Cloud.

# After you logged in, you can choose from two modes to sync your birthday boards.

Upload - this mode will put all the data in the cloud and replace the previews data.

Download - with this mode you will download all the data in the cloud to your device.

Note: after you activate the Sync feature, the BB app will sync every time you open the app in any of your devices. You can also sync manually, just by clicking on the option "Sync Data Across Devices"

# You can always stop the automatic sync with the option **Reset Syncing**.
